DETAILED ACTION***Reasons for Allowance***

The claimed yeast composition and method for preparing a yeast composition instantly claimed is neither taught nor reasonably suggested by the prior art of record. Applicant have demonstrated and EMF-treated yeast composition and method for its preparation and administration, whereby after EMF exposure, the EMF-treated yeast showed unexpected enhanced properties. For example, page 20 table 2 of the specification, showed that EMF-activated yeast composition were tested and found to treat epilepsy in a subject by significantly decreasing the number of rats with seizures, as compared to the control yeast composition. The results demonstrated that rats in the test group of AY who were given an activated yeast composition compared the control yeast group of NY who were given a control yeast composition, the negative control group of CK1 who were given saline and the positive control group of CK2 who were given phenobarbital demonstrated unexpected enhanced properties over groups NY, CK1, and CK2 (see, e.g. table 2). Furthermore, page 21 table 3 of the specification, showed that EMF-activated yeast composition were tested and found to significantly increase in incubation time of the seizure and the life span of rat after cardiazol injection, as compared to the control yeast composition. The results demonstrated that rats in the test group of AY who were given an activated yeast composition compared the control yeast group of NY who were given a control yeast composition, the negative control group of CK1 who were given saline and the positive control group of CK2 who
